Check Tutorial tab to know how to to solve.

Here is a sample line of code that can be executed in Python:

```
print("Hello, World!")
```

You can just as easily store a string as a variable and then print it to stdout:

```
my_string = "Hello, World!"
print(my_string)
```

The above code will print `Hello, World!` on your screen. Try it yourself in the editor below!

Input Format

You do not need to read any input in this challenge.

Output Format

Print `Hello, World!` to stdout.

Sample Output 0

```
Hello, World!
```

Congratulations

You solved this challenge. Would you like to challenge your friends?

Function Description

Complete the $solveMeFirst$ function with the following parameters:

- $int\ a$: the first value
- $int\ b$: the second value

Returns

- int: the sum of a and b

Constraints

$1 \leq a, b \leq 1000$

Sample Input

```
a = 2
b = 3
```

Sample Output

```
5
```

Explanation

$2 + 3 = 5$.
